

# Computer Science Club Applied Programming Subgroup

Official name : TBD

First official meet!  
Fridays 2:00 – 4:00 PH 208

Open up a laptop and make/open your  
GitHub account && LeetCode account!  
This will be needed for later today.

Side note : Add me please I need friends:  
<https://github.com/ateschan>

#1

<https://devpost.com/>

Open hackathons that you can compete in from home!

## #2

If you have not done so, make a GitHub account and a leet code account.

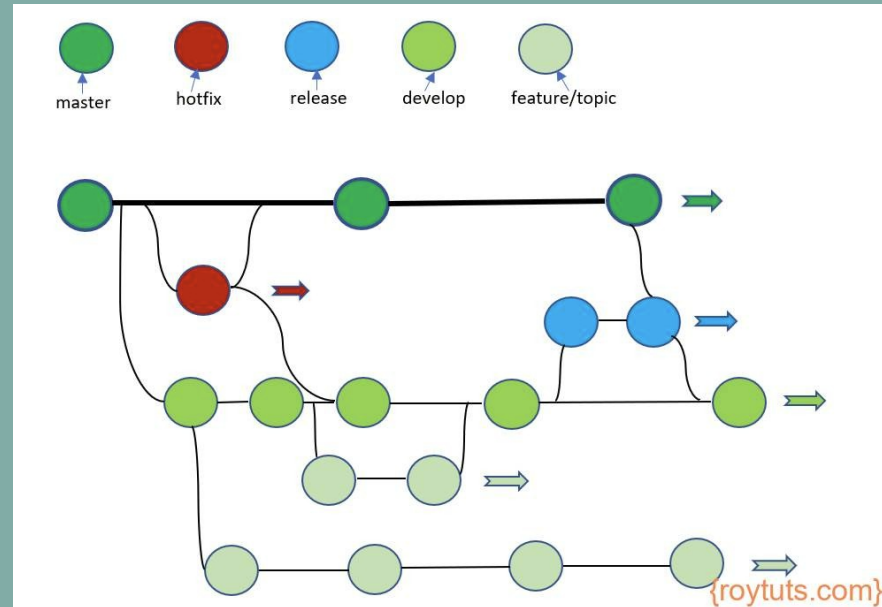

Install git on your developer machine.

# #3

What is software collaboration?

What is leet code?

# Why?

The concept of “use it or lose it”

Stop writing garbage. Seriously.

# Project Based Learning

What we have : ~48x Dell Servers right outside.

What we need : Students willing to go outside of their comfort zone and learn how to write and deploy real projects/solutions.

# Whar

This is not a linux or networking group nor will it become one.

But.

As software engineers you will need to know how to interface with POSIX Compliant systems and the basics of TCP/IP networking to successfully deploy a project.

# Let's get started!

Open up leet code.

Go to Problems → “Two Sum”

Complete two sum.

If you get stuck ask your classmate.

# Let's get started!

Make branch of

<https://github.com/ateschan/leetcode-submissions>  
Fork.

Add Leetcode work.

Merge Fork.

I don't want:

.settings

.cache

.idea

# Congratulations

You just made your first contribution to a larger project!

Maybe spend some time looking at your other classmates submissions and help them out?

# Open Discussion

Group Name?

What projects are you interested in making?

What language?

When? How? Who?

Methods of contact for this group?

This vs our normal CS club?

Meetup time?
